Lamp or Laser?

Pros of Each Projector Type

Advantages of laser projectors?

Gives 16-20,000 hours or at 8 hours/day, 5 days/week, 50 weeks/year will last 10 years. A wider range of colours and better contrast ie, deeper blacks and whiter whites. Keep colour and brightness over a longer period. Lower maintenance with no inconvenience and cost of bulbs to replace, especially if the projector is high up. They won't overheat and have instant on/off as no cooling is needed. More energy efficient. Greater flexibility with installs. Don't slowly fail like lamps and they run quieter. The preferred choice if the projector is used all day or everyday.

Advantages of lamp projectors?

Lamps give 3000—5000 hours at full power

Less expensive to purchase initially. Replacing the lamp makes the image quality as new again. Lamps are easy to replace and it's easy to carry a spare.

If you're on a budget or you won't be using the projector for many hours each week then a lamp projector may be the preferred choice.

However, the prices of laser projectors are coming down fast!

We want a projector, but do we choose lamp or laser?
